

in-place-noi: run record

Module 1.5 · Claude Skill **in-place-noi** (folder in-place-noi/SKILL.md) · tested against Cedar Ridge Apartments, known answer from Module 1.3 · 2026-10-05

The job, mapped before writing the Skill

Question	Answer
What starts it	A listing's rent roll and expense summary land, and someone asks for NOI or the cap rate.
What has to be handed in	A rent roll (unit, status, lease dates, monthly rent, and the notes below the table), an annual expense summary with other income, and the asking price.
What it produces	A broker-note map, the 11-line worksheet, NOI, the cap rate, a self-check, and diligence flags.
What it must ask about, not guess	• A missing asking price. • A unit with no rent, or a status other than occupied or vacant. • A concession or non-revenue note it can't price. • A note that contradicts the table. • Line items that don't add up to the stated totals. • Expenses that aren't annual. • Unit counts that disagree. Expired-but-occupied leases and below-market rents are handled by written convention and flagged, not guessed.
How I know it worked	It matches my Module 1.3 hand worksheet on every line (\$98,100 NOI, 5.61%). It produces the same result on repeat runs and with the rent roll rows shuffled.

Runs

Each run was a fresh Claude conversation (Claude Opus 5.5). Each was invoked as `/in-place-noi` with the path to the Skill file and the two CSVs; the assistant opened all three from disk itself, and nothing was pasted. Runs 1 and 2 used the original files. Run 3 used a copy of the rent roll with the 12 unit rows shuffled (109, 104, 111, 101, 112, 102, 105, 110, 108, 106, 103, 107). The notes and expense file were unchanged.

Line	Hand (1.3)	Run 1	Run 2	Run 3 (shuffled)
1. Gross potential rent	208,200	208,200	208,200	208,200
2. Less vacancy loss	(18,000)	(18,000)	(18,000)	(18,000)
3. Less non-revenue units	(17,400)	(17,400)	(17,400)	(17,400)
4. Less concessions (yr 1)	(1,500)	(1,500)	(1,500)	(1,500)
5. Effective rental income	171,300	171,300	171,300	171,300
6. Plus other income	6,600	6,600	6,600	6,600
7. Effective gross income	177,900	177,900	177,900	177,900
8. Less operating expenses	(79,800)	(79,800)	(79,800)	(79,800)
9. In-place NOI	98,100	98,100	98,100	98,100
10. Asking price	1,750,000	1,750,000	1,750,000	1,750,000
11. Going-in cap rate	5.61%	5.61%	5.61%	5.61%
Self-check passed (line 5, unit count)	n/a	yes	yes	yes
Stop-and-ask triggered	n/a	no	no	no

No worksheet line moved between runs, and shuffling the rows changed nothing. Row order does not matter because the Skill keys units by number.

What moved between runs (none of it a number)

Item	Run 1	Run 2	Run 3
Broker note on unit 111	Assigned to line 2	"Explains only"	"Explains only"
Which leases are in year one	Not listed	Listed 101, 102, 104–107, 110. Missed 103 (started 2025-11-01) and 112 (2026-01-01). No effect on any number.	Listed 101–107, 110, 112 (correct)
Flags beyond the Skill's list	103/107 rollover; unit 110 next-12 range of \$16,500–\$18,000	\$4,200 upside on the \$1,450 units	\$4,200 upside; question on the manager's 24-month lease

What the drift means. The arithmetic held because every line has an explicit rule. The places that drifted are the places the Skill left open:

- A note can both explain a figure and feed a line, and the Skill's categories don't cover that case.
- Step 6 didn't say the flag list was closed, so each run added flags of its own.

Run 2's year-one list was wrong in its explanation only. That matters: on a building where unit 103 carried a concession, the same slip would move line 4.

Next revision:

- Add a "confirms a figure" category to the note map.
- Make Step 6 the complete list of flags, plus leases ending within 90 days.
- Require the year-one list to show each lease start date beside the 12-month cutoff, so a slip is visible.

What's in this zip

- in-place-noi/SKILL.md: the packaged instruction (the Skill), exactly as run.
- run-record.pdf: this document.
- session-log.pdf: the full transcript of run 1. It shows the assistant opening the Skill and both Cedar Ridge files from disk, then the complete output.
- test-files/: the Cedar Ridge inputs, including the shuffled rent roll used for run 3.
